## **AMENDMENTS**

The following listing of Claims will replace all prior versions and listing of claims in the application:

1. (currently amended) A method for launching a browser or other service, comprising the steps of:

determining if a predetermined event related to activity of a web or network service has occurred; and

sending a command to a system to launch the browser or service to a particular network location if the predetermined event is determined to have occurred.

- 2. (original) The method as defined in claim 1, wherein the browser and/or service is launched after receipt of the command to launch.
- 3. (original) The method as defined in claim 1, wherein the determining step comprises receiving information including a request to launch or other information relating to the predetermined event.
- 4. (original) The method as defined in claim 3, wherein the receiving information step comprises the step of authenticating the received information and only sending the command to launch the browser and/or service if the request is properly authenticated.
- 5. (original) The method as defined in claim 3, wherein the receiving information step comprises the step of listening on a network for requests to launch the browser and/or service or other information relating to the predetermined event.
- 6. (currently amended) The method as defined in claim 1, wherein the determining step comprises the step of polling the web or network service a web site to determine if the predetermined event has occurred.

S/N: 09/940,596 Case: 10007688-1 Response to Office Action

- 7. (currently amended) The method as defined in claim 1, wherein the predetermined event is an indication that a print job at the network service is completed.
- 8. (currently amended) The method as defined in claim 1, wherein the predetermined event is an indication that a print job at the network service has been interrupted.
- 9. (currently amended) The method as defined in claim 1, wherein the predetermined event is an indication that a job at the a web service has been interrupted.
- 10. (currently amended) A program product for launching a browser or other service, comprising:

a computer useable medium having machine readable program code embodied thereon which, when executed, causes the following steps to be performed:

determining if a predetermined event related to activity of a web or network service has occurred; and

sending a command to a system to launch the browser or service to a particular network location if the predetermined event is determined to have occurred.

- 11. (original) The program product as defined in claim 10, wherein the program code for the determining step comprises code for receiving information including a request to launch or other information relating to the predetermined event
- 12. (original) The program product as defined in claim 10, wherein the program code includes code for causing the receiving information step to perform the step of listening on a network for requests to launch the browser and/or service.

S/N: 09/940,596 Case: 10007688-1 Response to Office Action

- 13. (currently amended) The program product as defined in claim 10, wherein the program code includes code for causing the determining step to perform the step of polling the web or a network service to determine if the predetermined event has occurred.
- 14. (currently amended) A system for launching a browser or other service, comprising:
  - a memory; and
- a computer system operatively connected to the memory, wherein the computer system comprises the following components:
- a component for determining if a predetermined event related to activity of a web or network service has occurred; and
- a component for sending a command to a system to launch the browser or service to a particular network location if the predetermined event is determined to have occurred.
